What is so good in  
the Language File System  
in Extended DISC®?

EXTENDED  
DISC

- Gives the option to use many languages within the Extended DISC Systems no matter what delivery method or tool is used.
- Makes it easy to switch system from one language to another and have the same report in several languages.
- The language of the questionnaire in which respondent answers does not influence the language of the report.
- Once a person completes the Extended DISC Questionnaire, the report can be printed in any of the available languages – no need to do the same process again.
- The Language File System is available for all Extended DISC Tools.
- Enhances performance by providing reports in native languages.
- The quality of all the language files is monitored constantly for up-to-date and validation.

I am a CEO of a large globally operating company in Finland.  
What benefits I will get from your language file system?

- In a situation where a new project team is created from international members, individual Extended DISC report of each of them can be combined together in a team report in a corporate language.
- In international recruitment for global positions, each candidate can answer the questionnaire in their native language, while the report can be produced in another one.
- All Extended DISC reports produced in any location of your company can be delivered to you in your official corporate language and also in your local language(s). Reports can also be produced later in another language, based on your current business need.
